BS322 is a breast tissue marker. The BS322 polynucleotides and polypeptides are to detect and diagnose breast disease, e.g. breast cancer. The BS322 polynucleotides are useful as disource of probes and primers, and the BS322 polypeptides are useful as antigens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Cohen M, Colpitts TL, Friedman PN, Gordon J; es SC, Klass MR, Kratochvil JD, Russell JC;

Identifying tissue (tumor)-specific polynucleotides overexpressed in tissue of interest as compared to control tissue, for detecting cancer cells in patient, comprises DNA microarray analysis or quantitative
                                                      Example; Page 108-111; 127pp; English
                                   polymerase chain reaction.
```

The invention relates to identifying tissue-specific polynucleotides (P) from that involves performing a genetic subtraction to identify pool of from tissue of interest (TI), performing DNA microarray analysis to identify first subset of polynucleotides (SP1) at least 2-fold over expressed in TI, and performing quantitative polymerase chain reaction (PCR) analysis on SP1 to identify second subset of (P). The method is useful for determining the presence or absence of a cancer cell in patient, monitoring the progression of cancer in a patient using a biological sample such as blood, serum, lymph nodes, bone marrow, sputum, urine or a tumour biopsy sample. The methods are useful for determining the presence of or monitoring progression of prostate, breast, ollon, ovarian, lung, head and neck, lymphoma, leukemia, melanoma, liver, gastric, kidney, bladder, pancreatic or endometrial cancer. Sequences ARG65983-987 represent determined splice variants of B726P

Human breast cancer protein encoded by cDNA B726P-spliced seq_B726P. ss; breast cancer protein; tumour; cancer; cytostatic; gene therapy; immunogen. Human;

Homo sapiens

The invention relates to isotated press to under processing and incircing and antibodies that encode them, including immunogenic fragments of the proteins.

Also included are expression vectors expressing the proteins, transformed cells and antibodies raised against the proteins or an antigen presenting cell expressing the protein. The proteins and nucleic acids may be used in the prevention, diagnosis and treatment of diseases associated with the prevention, diagnosis and expression, i.e. breast tumours and breast cancer e.g by gene therapy. The nucleic acids and their complements may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The proteins may be used in assays to identify modulators (e.g. antagonists) of breast tumour protein expression and activity. The antibodies may also be used to down regulate expression and activity. The antibodies may also be used to down regulate expression and activity. The antibodies may also be used to down capulate approach and activity. The antibodies may also be used to down capulate approach and activity are presence of the proteins in samples (e.g. by enzyme linked immunosorbant assay (ELISA)) and in other immunopur protein encoded by a cDNA fibrart cumour protein encoded by a cDNA fibrart a normal breast cDNA QKSVPNKALELKNEQTLRADEILPSESKOKDYEESSWDSESLCETVSOKDVCLPKATHQK 180 313 KEIDKINGKLEGSPVKDGLLKANCGMKVSIPTKALELMDMQTFKAEPPEKPSAFEPAIEM **EIDKINGKLEESPDNDGFLKAPCRMKVSIPTKALELMDMQTFKAEPPEKPSAFEPAIEMQ** KEIDKINGKLEGSPVKDGLLKANCGMKVSIPTKALELMDMQTFKAEPPEKPSAFEPAIEM KSVPNKALELKNEQTLRADOMPPSESKOKNVEENSWDSESLRETVSOKDVCVPKATHOKE MQKSVPNKALELKNEQTLRADE1LPSESKQKDYEESSWDSESLCETVSQKDVCLPKAAHQ Gaps The invention relates to isolated breast tumour proteins and nucleic Hepler WT; Breast Tumor Proteins and nucleic acids useful for the prevention diagnosis and treatment of breast cancer. ö 4; Indels Harlocker SL, Score 2023; DB 4; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated breast tumour polynucleotide and the polypeptide it encodes. The polynucleotide and polypeptide are useful for detecting the presence of breast cancer in a patient, and in pharmaceutical compositions for treating breast cancer. The sequences are useful for stimulating an immune response in a patient and can therefore be useful production of vaccines. The sequences are also useful for detecting the presence of a cancer in a patient, by obtaining a biological sample from the patient, contacting the biological sample with that hybridizes to the sample. This sequence represents a human breast tumour polypeptide of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           specific for a tumour protein. The invention further comprises human nucleic acids and proteins that are associated with tumours (e.g. breast cancer). The method and sequences of the invention are useful for stimulating and/or expanding T cells specific for a tumour protein, detecting the presence of cancer, stimulating an immune response in a patient and treating breast cancer. The present amino acid sequence represents a human tumour-related protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Fanger GR;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        612
                                                                                                            The invention relates to an isolated breast cancer-associated polypeptide. The polypeptide may be used for the diagnosis and treatment of breast cancers. The methods are useful for detecting the presence of a cancer in a patient and treating a cancer in a patient. The present sequence represents the amino acid sequence of a human breast cancerassociated polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                              9

                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated polypeptide comprising at least an immunogenic portion of a breast tumour protein. The polymucleotide, its polypeptide, its antibody, a pharmaceutical composition comprising the fusion protein or the polymucleotide encoding it, a vaccine comprising the fusion protein or the polymucleotide encoding it, an isolated T cell to population comprising T cells specific for a breast tumour protein, and a method for removing tumour cells from a biological sample is useful for inhibiting the development of a cancer in a patient. The polypeptide is useful for expanding T cells specific for a breast tumour protein is useful for inhibiting the development of a cancer in a patient. The method additionally involves the step of cloning at least one proliferated cell and then administering the cloned T cells at least one proliferated cell and then administering the cloned T cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            240

                                                                                                                                                                                                                                                       The invention relates to isolated breast tumour proteins and nucleic acids that encode them, including immunogenic fragments of the proteins. Also included are expression vectors expressing the proteins, transformed cells and antibodies raised against the proteins or an antigen presenting cell expressing the protein. The proteins and nucleic acids may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate breast tumour protein expression, i.e. breast tumours and breast cancer e.g by gene therapy. The nucleic acids and their complements may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The proteins, nucleic acids and antibodies may be used in assays to identify proteins, nucleic acids and antibodies may be used in assays to identify
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        KEIDKINGKLEGSPVKDGLLKANCGMKVSIPTKALELMDMQTFKAEPPEKPSAFEPAIEM 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               QKSVPNKALELKNEQTLRADEILPSESKQKDYESSSWDSESLCETVSQKDVCLPKATHQK 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              modulators (e.g. antagonists) of breast tumour protein expression and activity. The antibodies and antagonists may also be used to down regulate expression and activity. The antibodies may also be used as diagnostic agents for detecting the presence of the proteins in samples (e.g. by enzyme linked immunosorbant assay (ELISA)) and in other immunotaristic adjance to techniques. The present sequence is a breast tumour protein encoded by a CDNA from a breast tumour cDNA library isolated by subtractive hybridisation against a normal breast CDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 MQKSVPNKALELKNEQTLRADEILPSESKQKDYEESSWDSESLCETVSQKDVCLPKAAHQ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated breast tumour polynucleotide and the polypeptide it encodes. The polynucleotide and polypeptide are useful for detecting the presence of breast cancer in a patient, and in pharmaceutical compositions for treating breast cancer. The sequences are useful for stimulating an immune response in a patient and can therefore be used in production of vaccines. The sequences are also useful for detecting the presence of a cancer in a patient, by obtaining a biological sample from the patient, contacting the biological sample with a composition of the invention and detecting the amount of polynucleotide that hybridizes to the sample. This sequence represents a human breast

                                                                                                                                                                                                                                                                     The invention comprises a method of stimulating and/or expanding T or specific for a tumour protein. The invention further comprises human nucleic acids and proteins that are associated with tumours (e.g. brocancer). The method and sequences of the invention are useful for stimulating and/or expanding T cells specific for a tumour protein, detecting the presence of cancer, stimulating an immune response in spatient and treating breast cancer. The present amino acid sequence represents a human tumour-related protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated breast cancer-associated polypeptide. The polypeptide may be used for the diagnosis and treatment of breast cancers. The methods are useful for detecting the presence of cancer in a patient and treating a cancer in a patient. The present sequence represents the amino acid sequence of a human breast cancerassociated polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              EIDKINGKLEESPDNDGFLKSPCRMKVSIPTKALELMDMQTFKAEPPEKPSAFEPAIEMO

The invention relates to isolated breast tumour proteins and nucleic acids that encode them, including immunogenic fragments of the proteins. The included are expression vectors expressing the proteins, transformed cells and antibodies raised against the proteins or an antigen presenting cell expressing the protein. The proteins and nucleic acids may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate breast tumour protein expression, i.e. breast tumours and breast cancer e.g by gene therapy. The nucleic acids and their complements may also be used as DNA probes in 'diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The conductors (e.g. antagonists) of breast tumour protein expression and activity. The antibodies and antagonists may also be used as sectivity. The antibodies and antagonists may also be used to down activity. The antibodies and antagonists may also be used as sectivity activity and cativity. The antibodies mad antagonists may also be used as sectivity activity also and activity. The antibodies may also be used as used as ciagnostic agents for detecting the presence of the protein in samples (e.g. by enzyme linked immunosorbant assay (ELISA)) and in other immunocided by a cDNA from a breast tumour protein encoded by a cDNA from a breast tumour protein encoded by a cDNA from a breast tumour protein encoded by a cDNA from a breast tumour protein encoded by a cDNA from a breast tumour protein encoded by a cDNA from a breast tumour protein encoded by a cDNA from a breast tumour protein encoded by a cDNA from a breast tumour protein encoded by a cDNA from a breast tumour protein encoded by a cDNA from a breast tumour protein encoded by a cDNA from a breast tumour protein encoded by a cDNA from a breast tumour protein encoded by a cDNA from a breast tumour protein encoded by a cDNA from a breast tumour protein encoded by a cDNA from a breast tumour protei

The method is useful for determining the presence or absence of a cancer cell in patient, monitoring the progression of cancer in a patient using a patient, monitoring the progression of cancer in a patient using a biological sample such as blood, serum, lymph nodes, bone marrow, sputum, urine or a tumour biopsy sample. The methods are useful for determining the presence of or monitoring progression of prostate, breast,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Genetic subtraction, DNA microarray analysis, polymerase chain reaction, cancer, B726P, ss.

Also included are expression vectors expressing the proteins, transformed cells and antibodies raised against the proteins or an antigen presenting cell expressing the protein. The proteins and nucleic acids may be used in the prevention, diagnosis and treatment of disease associated with inappropriate breast tumour protein expression, i.e. breast tumours and breast cancer e.g by gene therapy. The nucleic acids and their complements may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The proteins, nucleic acids and antibodies may be used in assays to identify
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              modulators (e.g. antagonists) of breast tumour protein expression and activity. The antibodies and antagonists may also be used to down regulate expression and activity. The antibodies may also be used to down disposition and activity. The antibodies may also be used as disgnostic agents for detecting the presence of the proteins in samples (e.g. by enzyme linked immunosorbant assay (ELISA)) and in other immuno-purification disgnostic techniques. The present equence is a cDNA from a breast tumour cDNA library isolated by subtractive hybridisation against a normal breast cDNA library and encodes a breast tumour protein of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Hepler WT;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Breast Tumor Proteins and nucleic acids useful for the prevention, diagnosis and treatment of breast cancer.

The invention comprises a protein which contains an immunogenic portion of a breast antigen. The invention also comprises breast antigen-related has sequences. The protein of the invention is useful as a vaccine for inhibiting the development of breast cancer. The protein of the invention is used in adoptive immunotherapy for the treatment of cancer, and a pererating tumour-reactive T-cells which can be administered to a patient. The present DNA sequence represents a human breast antigenrelated nucleotide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               518

The invention relates to an isolated breast tumour polynucleotide and the polypeptide it encodes. The polynucleotide and polypeptide are useful for detecting the presence of breast cancer in a patient, and in pharmaceutical compositions for treating breast cancer. The sequences are useful for stimulating an immune response in a patient and can therefore be used in production of vaccines. The sequences are also useful for detecting the presence of a cancer in a patient, by obtaining a biological sample with a composition of the invention and detecting the biological sample with a composition of the invention and detecting the amount of polynucleotide that hybridizes to the sample. This sequence represents a human breast
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             140
                                                                                                                                                                                                                                                                                                                                                                                                                  Novel breast cancer polynucleotides and polypeptides encoded by the polynucleotides, useful for detecting the presence of breast cancer in a patient, and in pharmaceutical compositions, for treating breast cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ArgleuAlaSerAlaValGlnAspHisAspGlnIleValThrSerArgLysSerGlnGlu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AlaSerGlnTyrSerGlyGlnLeuLy8ValLeuIleAlaGluAsnThrMetLeuThrSer
